**Project 2 - Documentation Sprint Workflow Notes created by Johney:**

---

**Sprint Sessions Color-Coded Meaning:**

Red = Still Needed (Not the person's turn yet)

Yellow = In Progress

Green = Completed!

---

**Group 1: Game Logic - Wyatt, Eden and Forest:**

- **Task - Easy Mode and Extra UI Implementations (Wyatt):**
  - Start Date:
    - Answer: 9/29/26
  - Expected amount of time to complete assignment (Johney's response):
    - Answer: 2 hr
  - Actual amount of time it took to complete assignment:
    - Answer: 4 hr
  - Brief explanation of what you've done:
    - Answer: I created an algorithm for Easy Difficulty AI, I implemented the AI Player and Tag-Team modes, and I created the UI to change through the play modes and AI difficulty.
  - Errors you've ran into (if any):
    - Answer: I had issues with getting the difficulty slider to display the string value representing the difficulty of the AI.
  - How you've fixed them:
    - Answer: I fixed this by having the oninput trigger a function that changes the text content of the difficultly text rather than change it directly itself.
  - Summary of your discoveries:
    - Answer: I got rid of the main function in the Minesweeper.js and replaced it with functions tied to the aiPlayer, tagTeam, and userPlayer buttons that I added in index.html. I created the easy AI algorithm to work for one turn, and had the aiPlayer function repeat the turn until the game was over and I made the Tag-Team mode have the AI make a move whenever a player reveals a non-mined grid.
  - Any further Recommendations:

        - Answer: Eden and Forest just need to make algorithms for medium and hard by making functions that work for one turn of the algorithm. I labeled the spaces where those functions need to be called for AI Player and Tag-Team mode, and all they need to do is replace the return; with their respective function call.
    - End Date:
        - Answer: 9/29/26

- **Task - Medium Mode (Eden):**
    - Start Date:
        - Answer: 9/30/2026
    - Expected amount of time to complete assignment (Johney's response):
        - Answer: 1 hr
    - Actual amount of time it took to complete assignment:
        - Answer: 1.5 hours
    - Brief explanation of what you've done:
        - Answer: Implemented the medium difficulty AI modifier
    - Errors you've ran into (if any):
        - Answer: Infinite loops created because the algorithm would detect a state to reveal tiles but fail to reveal them, returning without doing anything
    - How you've fixed them:
        - Answer: Fixed the compiler issue (I hate javascript it took me so long to find this issue, a normal language would have just told me it in the compiler)
    - Summary of your discoveries:
        - Answer: Just completed the algorithm as specified, Wyatt did an excellent job of making my task easy.
    - Any further Recommendations:
        - Answer: Easier difficulties turns can just be called given the implemented difficulties added features aren't found.
    - End Date:
        - Answer: 9/30/2026
- **Task - Hard Mode (Forest):**
    - Start Date:

    - Answer: 10/6/26
- Expected amount of time to complete assignment (Johney's response):
    - Answer: 1 hr or 1.5hr
- Actual amount of time it took to complete assignment:
    - Answer: 1.5 hours
- Brief explanation of what you've done:
    - Answer: Made a algorithm that detects if a tile follows a 1-2-1 pattern, and reveals it if so
- Errors you've ran into (if any):
    - Answer: None
- How you've fixed them:
    - Answer: None
- Summary of your discoveries:
    - Answer: None
- Any further Recommendations:
    - Answer: None
- End Date:
    - Answer: 10/6/26

---

**Group 2: New Feauture/CSS - Chris and Ruben**

- **Task - Feauture/CSS #1 (Chris):**
    - Start Date:
        - Answer: 10/7
    - Expected amount of time to complete assignment (Johney's response):
        - Answer: 2 hours
    - Actual amount of time it took to complete assignment:
        - Answer: 1 hour
    - Brief explanation of what you've done:
        - Answer:I implemented a feature to do a 3x3 reveal as a new addition and also added a stopwatch to record the time of an attempt
    - Errors you've ran into (if any):
        - Answer: Not an error, just understanding how the previous team implemented the game
    - How you've fixed them:

        - Answer: Just reviewed the comments and implemented from there
    - Summary of your discoveries:
        - Answer: N/A
    - Any further Recommendations:
        - Answer: N/A
    - End Date:
        - Answer:10/8
- **Task - Feauture/CSS #1 (Ruben):**
    - Start Date:
        - Answer: 10/7
    - Expected amount of time to complete assignment (Johney's response):
        - Answer: 3 hours
    - Actual amount of time it took to complete assignment:
        - Answer: 3 hour
    - Brief explanation of what you've done:
        - Answer:I implemented a feature to do a 3x3 reveal as a new addition and also added a stopwatch to record the time of an attempt, as well as made bigger UI changes.
    - Errors you've ran into (if any):
        - Answer: A couple misbehaviors in regards to the color not fitting into the shape and sizing issues but those are more bugs than errors.
    - How you've fixed them:
        - Answer: Continually testing and redoing the code implementation.
    - Summary of your discoveries:
        - Answer: N/A
    - Any further Recommendations:
        - Answer: N/A
    - End Date:
        - Answer:10/10

---

**Group 3: Testing And Documentation - Daniel and Hannah:**

- **Task - Testing (Daniel):**
    - Start Date:

        - Answer: 10/6/2026
    - Expected amount of time to complete assignment (Johney's response):
        - Answer: 1hr or 1.5hr
    - Actual amount of time it took to complete assignment:
        - Answer: 3 hours
    - Brief explanation of what you've done:
        - Answer: Reworked hardmode ai. This was later reworked again by a different group. Fixed Broken sliders on page reload. Fixed small code variable typos.
    - Errors you've ran into (if any):
        - Answer: issues around not having the latest version of code.
    - How you've fixed them:
        - Answer: Talking to people at meetings.
    - Summary of your discoveries:
        - Answer: How important communication  surrounding ownership of sections is and deciding when something is a bug that needs to be fixed vs a rework.
    - Any further Recommendations:
        - Answer: Have a 30 minute session where we all learn to use git.
    - End Date:
        - Answer: 10/9/2026
- **Task - Documentation (Hannah):**
    - Start Date:
        - Answer: 9/25/2026
    - Expected amount of time to complete assignment (Johney's response):
        - Answer: 2hr
    - Actual amount of time it took to complete assignment:
        - Answer: 3hr
    - Brief explanation of what you've done:
        - Answer: Complete all weekly meeting logs, tracking estimated time spent and actual time spent for each task.  Created New Features documentation (Software Documentation and UML diagrams for each new feature)
    - Errors you've ran into (if any):

    - Answer: missing documentation by the previous development team, some features from our team that require more clarity to develop the documentation
- How you've fixed them:
    - Answer: will bring up during our next meeting
- Summary of your discoveries:
    - Answer: This P2 helped me understand how important documentation is in understanding the code–we were given very little to work with (only one diagram, and no Software Architecture document). It showed how important it is to keep up with this information, not only for the current team, but also for future teams.
- Any further Recommendations:
    - Answer: I'd recommend adding detailed comments as outlined in the project's grading criteria as we go, so we don't need to coordinate additional merges to add everyone's comments at the end of the project.
- End Date:
    - Answer: 10/11/2026

-
