

Team Meeting Log

Complete one log for every team meeting, including meetings you hold on your own outside the weekly standup. Store completed logs in teams GitHub repository.

Team #	23
Date	09/10/2026
Time (start – end)	4 - 5pm
Location	Eaton 3001
Meeting objective	Kickoff

Attendance

List every team member. Mark present or absent, and note the reason for any absence.

#	Team member	Present	Absent	Reason if absent
1	Isaac Miller	X		
2	Alexander Toles	X		
3	Jaiden Watts	X		
4	Jude Weller	X		
5	Courtney McCray	X		
6	Bryant H Goseland	X		
7	Joshua L Pearson	X		
8	Sam R Prestigiacomo	X		

1. Task Completion Confirmation

What each member committed to at the last meeting, and where it stands now. Use: Completed / In progress / Not started.

Team member	Task assigned last meeting	Status
Issac Miller		
Alexander Toles		
Jaiden Watts		
Jude Weller		
Courtney McCray		
Bryant H Goseland		
Joshua L Pearson		
Sam R Prestigiacomo		

2. Discussion Summary and Decisions Made

What the team discussed and what you decided. Record decisions clearly enough that an absent teammate could catch up from this alone.

We assigned team roles, and discussed responsibilities. The team went over personal strengths and weaknesses, as well as what coding languages we are most comfortable with. A shared google drive, github repository and discord server were created.

Decisions made:

- Using C for game backend and HTML for user interface

3. Roadblocks and Impediments

Anything slowing the team down — technical problems, unclear requirements, dependencies, scheduling. Note who is affected and what the team plans to do about it.

The greatest roadblocks for the team are understanding the timeline of the project. The due date in Canvas is Sept. 20, but there was confusion on if the project needs to be presented at our Sept. 17 scrum. We reached out to our TA for clarification on these topics.

4. Tasks Allocated for Next Meeting

Every task needs a named owner and a due date. "The team will work on the UI" is not a task.

Owner	Task	Due date	Est. hours
Issac Miller	Checking win condition	09/17/25	1-2
Alexander Toles	Creating code documentation, UML diagrams	09/17/25	1-2
Jaiden Watts	Creating game board setup	09/17/25	1-2
Jude Weller	Adding tile reveal	09/17/25	1-2
Courtney McCray	Generating test cases, testing code	09/17/25	1-2
Bryant H Goseland	Generating test cases, testing code	09/17/25	1-2
Joshua L Pearson	Creating Makefile, bug fixing	09/17/25	1-2
Sam R. Prestigiacomo	Creating user interface	09/17/25	3-4

5. Person-Hours Logged This Week

Required for the project documentation grade. Record actual hours spent on coding, testing, meetings, and documentation — excluding EECS 581 lectures. Keep this current every week; it cannot be reconstructed accurately at the end of the sprint.

Team member	Work performed (day by day)	Hours
