

Minesweeper Test Cases: Testing the UI Gameboard

Test case	Input	Expected Output	Actual Output	Notes
First Prompt (choosing number of mines)	-1, 0, 1-9, 21, 100, 10000000, 000000, 9.99, 20.01,	Not an option for the user.	Does not allow the slider to go out of the range.	Works as expected.
	a, A, abcdefghij klmnopqrs tuvwxxyz, !@#, .10, .20	The first prompt does not accept input from the user, so it is not an option.	Does not allow any input other than moving the given slider.	Works as expected.
	10-20	The game should accept and continue.	Shows board for a new game to begin.	Works as expected.
Number of mines on the board match mine input from the user	10-20	Mines should be the same as the amount entered (10-20)	All numbers 10-20 represents the correct amount of mines	Works as expected for each possible input (10-20).
	10-20	No mines have the same coordinates as another mine.	No mines share coordinates.	Works as expected for each possible number of mines.

Revealing the same Square	(1, A), (1, A)	The game board does nothing, waiting for a new square to be clicked.	The game board does nothing, waiting for a new square to be clicked.	Works as expected.
Hitting a Mine	Location of a known mine.	Reveals all of the mines and prints "Game over you hit a mine..."	Reveals all of the mines and prints "Game over you hit a mine..."	Works as expected.
Flagging System	Right Clicking on an unfound cell.	Place a flag in the right-clicked cell that is visible to the user.	Place a flag in the right-clicked cell that is visible to the user.	Works as expected.
	Right clicking on a flagged cell.	Take away a flag that was already placed in the clicked cell.	The current flag disappears and the cell is empty again.	Works as expected.
Winning a Game	Clicking every cell without a mine.	A message to the user that they have won the game.	Prints "Game over you win!"	Works as expected.
	After winning a game, clicking on game board cells.	Should not affect the game board.	Does not affect the game board. The program waits for a new game.	Works as expected.

Old Test Cases from Original Minesweeper.c File

*Note: We switched to a .js file for easier connection to the .html GUI.

Test case	Input	Expected Output	Actual Output	Notes
Enter Row	0, 11,	Reprompt "Enter Row"	"Enter Column: "	The program doesn't recognize when non-valid integers are input.
	a, aa, E		"Enter Row: "	Works
	-2		"Enter Column:"	Accepts negative row input.
	1-10	Accepts input correctly	Shows nearby mines	Works
Enter Column	11,	Reprompt "Enter Column"	"Enter row: Enter column: "	Entering numbers over 9 prints both
	aa		"Enter row: Enter row: "	Entering more than one letter prints enter row twice
	-4		"Enter row: Enter column:"	Accepts negative column input.

	A, B, C, ... J	Accepts input correctly	Shows nearby mines	Works
