

Group 23

Sept. 18

Overview:

- After experiencing trouble with Emscripten, the team decided to translate the initial C code into JavaScript, so that it could be easily implemented into an HTML file.
- [Minesweeper.js](#) now holds the functionality and game logic and is displayed by the index.html file.

Sept. 19

Overview:

Most of the game-logic previously created was not changed. The majority of the gameplay loop that was previously handled in the main() has been moved into separate functions, and the HTML elements have been added.

Changes:

- Prompt functionality was removed from [Minesweeper.js](#) to make it more compatible with the new HTML grid.
- buildGrid() creates the grid of HTML elements that handle left-clicking and right-clicking.
- render() was created and updates the display and is called whenever an action is taken such as revealing or flagging.
- handleReveal() was created.
- handleFlag() was created, updating the flag grid.
- revealAllMines() was created.
- newGame() was created and is responsible for initializing game boards and HTML grid.
